

CASE STUDY

BSI British Standards PDA Health & Safety Assessment

Background and Client Objectives

In 2007, Roundpoint developed a new application for BSI British Standards enabling its customers to complete health and safety assessments on mobile devices. Specifically designed for pocket PCs/PDAs, the assessments are helping customers save time and money as previously the assessments could only be completed on paper. Before, the questionnaire had to be completed essentially twice, once on paper and once on the PC. The entire task is now simplified as the completed assessment automatically uploads to the PC and can be printed out immediately on return to the office. The tool can now be bought online at <http://www.bsigroup.com/OHSONline>

Modify the following fields as you need. You must enter a reference:

Assessment reference:

Company:

Department:

Auditor name(s):

Auditee name(s):

Assessment date(s):

Process, hazard, activity, department or function description:

Roundpoint's Solution

The Roundpoint on-line assessment system dynamically adapts to the device the user is operating at the time. By making use of mobile web technologies, the service is delivered to wireless PDAs as a web service. Because it utilises the onboard browser of device, no software needs to be installed and all data is stored centrally in real time. In this way, reports can be filed in the field and are immediately available in the home office. SSL connections are used to ensure data security.
